

ABEL BEKELE

Software Engineer

 abelbk06@gmail.com  +251984981703  Adama , Ethiopia  Website  LinkedIn  Github

OBJECTIVE

Software engineer with 3+ years of freelance, contract, and founder experience alongside a Computer Science degree, specializing in backend systems and full-stack products. Built and shipped SebeVerify, an AI-powered KYC platform verifying identities against Ethiopia's Fayda national ID system using OCR, facial recognition, and liveness detection. Led cross-functional teams through full SDLC delivery and owns services end-to-end, from API design to deployment.

EXPERIENCE

Ethronics, Backend Developer & Project Manager | intern

07/2024 – 09/2024 | Adama, Ethiopia

- Led a cross-functional team of 5 software engineers through the full SDLC, delivering the product 2 weeks ahead of schedule.
- Designed a 50+ endpoint RESTful API in Python/FastAPI with shared schemas, reducing frontend-backend integration time by 50% and enabling 3 frontend engineers to ship independently.
- Translated requirements from 4+ business stakeholders into technical specs, cutting requirement-revision cycles and reducing scope-change delays.
- Built PostgreSQL reporting queries that automated 50 manual reports, saving approximately 10 hours per week of analyst time.

Abel Automations, Founder & Lead Software Engineer | Abel Automations

01/2023 – 05/2024

-
- Architected and shipped Skillneta, a type-safe multi-tenant course platform serving 1,500+ users across 5 tenants and 15 courses, using Next.js/React (TypeScript) and Node.js/FastAPI; containerized with Docker.
- Built a high-concurrency FastAPI backend using async I/O, sustaining response times around 200ms under concurrent load.
- Cut manual client-operations workload by 40% through custom n8n and Python automation workflows.

Turing, Software Engineer | AI Training & Code Evaluation

03/2026 – 07/2026

- Developed and maintained 5 Python backend services for client-facing products, improving response times by 50% and supporting 1,000 active users; evaluated 500+ Python and TypeScript code samples for AI model training, giving structured feedback on correctness, efficiency, and style.

REVELO, Python & Typescript AI Coding Trainer

08/2025 – 09/2026

- Python/TypeScript AI coding trainer roles, continuing structured code evaluation and feedback work.

AfterQuery, Python AI coding Trainer

02/2026 – Present

- Python AI coding trainer roles, continuing structured code evaluation and feedback work.

EDUCATION

B.Sc. in Computer Science and Engineering

2022 – 2026 | Adama, Ethiopia

Adama Science and Technology University (ASTU)

CGPA: 3.5/4.0

Engineering Fellow | A2SV (Africa to Silicon Valley), A2SV

2024 – 2025

- Solved 300+ algorithmic problems focused on time/space complexity as part of an intensive technical curriculum.
- Conducted regular code reviews and technical walkthroughs, explaining complex logic and debugging strategies to peers.

SKILLS

Languages — Python, TypeScript, JavaScript (ES6+), Dart, SQL, C++

Frameworks & Tools — FastAPI, Django, Node.js, Next.js, React, Flutter, Docker, PostgreSQL, n8n, CI/CD, pytest, Jest, dbt, pandas, and Plotly

Practices — Code Review, Technical Documentation, Agile/Scrum, Remote Async Collaboration, Open-source contribution

Languages Spoken — English (Professional), Amharic (Native)

PROJECTS

SebeVerify , *Digital Identity Verification Platform*

11/2025 – 06/2026

- Built an AI-powered KYC platform for Ethiopia using OCR, facial recognition, and liveness detection to verify identity against Fayda national IDs and passports.

Transit Delay Analytics Pipeline 

06/2025 – 2026

- Built an end-to-end data pipeline ingesting 15,000+ raw transit performance records; cleaned and standardized data with pandas (missing timestamps, inconsistent naming, ~5% data-quality issues).
- Modeled data with dbt across staging → intermediate → mart layers with automated tests; built an interactive Plotly dashboard surfacing delay trends by route and time of day.

PySQLEngine , *SQL Database Engine Built from Scratch*

01/2026 – 06/2026

- Built a relational database engine in pure Python: recursive-descent SQL parser, cost-based query optimizer, B+Tree indexes, and MVCC with snapshot isolation and WAL-based crash recovery; validated with a 60+ test suite.

Skillneta.com , *Multi-Tenant Course Platform*

05/2024

Architected a scalable multi-tenant platform using Next.js/React (TypeScript) and Django, serving 1,500+ active users across 5 tenants and 15 courses; enforced strict type safety across the stack and containerized with Docker.

Social Guard (Mobile App) , *Screen-Time Tracking App (Flutter)*

05/2025 – 09/2025

Built a Flutter app using native Android background services to track app usage and enforce user-set limits in real time.

EXTRA-CURRICULAR ACTIVITIES

— 1st Place, CSEC-ASTU Hackathon (2026) • Top 4 Project, ASTU Best Projects (2026) • Mentor, AGT Hackathon • Competitive Programmer — LeetCode & Codeforces
